15. Supplementary Notes

16. Abstract (Limit: 200 words)

This report provides capacity data on commercial hazardous waste management facilities in all States. These data, along with those in the SARA State Capacity Reports, are designed to be used in conjunction with the Biennial Report data on waste generation to support the development of the States' CAP.

(Formerly NTIS-35)

Notice

This report contains only non-CBI (confidential business information) data. There is a second comprehensive CBI report that contains both non-CBI and CBI data, summaries for non-CBI and CBI data, and total aggregates. The analyses for your State Capacity Assurance Plan should evaluate the comprehensive data in the CBI report.

Disclaimer

Although this report has been funded by the United States Environmental Protection Agency through Contract No. 68-01-7053 to Versar Inc., it has not been subjected to the Agency's peer and policy review and therefore does not necessarily reflect the views of the Agency; no official endorsement should be inferred.

ACKNOWLEDGMENTS

This report was prepared by Versar Inc. of Springfield, Virginia, for the U.S. Environmental Protection Agency, Office of Solid Waste, Waste Management Division, Waste Treatment Branch (WTB), under EPA Contract No. 68-01-7053 (Work Assignment No. 133). Editing and technical content of this report were the responsibilities of the contractor. The EPA-WTB Work Assignment Manager was Jo-Ann Bassi, Acting Section Chief, Capacity and Storage; her support and guidance are gratefully acknowledged.

A number of Versar personnel have contributed to this project, particularly:

Work Assignment Manager - Paul Sylvestri
Principal Investigator - Mark Lieberman
Technical Support - Gina Orlando
Scott Wolff
Max Diaz
Mike Dorris
Capacity Area Manager - Tim Holden
Secretary - Susan Perry

We would also like to acknowledge the computer support efforts provided by DPRA Inc. personnel, including;

Team Leader - Carol Bristow
Programmer/Analyst - Bobbi Hiller
Michelle Yoder
Task Manager - Gregg Snell

Finally, special thanks are extended to the many members of the Versar engineering staff who participated in the extensive technical review and evaluation of the approximately 2,400 facility responses to EPA's National Survey of Hazardous Waste Treatment, Storage, Disposal, and Recycling Facilities (TSDR Survey). It was their hard work that allowed for the development of the specialized TSDR capacity data set for EPA and the output and analysis of management capacity data at the State level.

1. INTRODUCTION

The data provided in this report are designed to be used in conjunction with the following documents: (1) the Assurance of Hazardous Waste Capacity: Guidance to State Officials, which explains the requirements for the Capacity Assurance Plan (CAP); (2) the Technical Reference Manual for Reporting the Current Status of Generation, Management Capacity, Imports, and Exports, which was developed to assist States in the completion of the analyses described in Chapter III of the Guidance Document; and (3) the State Capacity Report, which provides data on hazardous waste management facilities within each State.

The data in this report are also provided on a 360K MS-DOS formatte floppy diskette. There are three files on this diskette: (1) a dBASE III PLUS file containing the data for the management systems at facilities, (2) a flat file containing the facility-level information, and (3) a flat file containing the system-level information for the facilities. The file structure specifications for each file are provided in the "README.1ST" file. The file structure is designed to be consistent with the new 1987 Biennial Report format and should also be consistent with the State's hazardous waste reporting system. Because the diskette is based on the new Biennial Report format, several of the data fields in the dBASE III PLUS and flat files appear in a different format from that used in this report. Specifically, the "permit status" and "commercial status" fields in the flat files and dBASE III PLUS file have been translated from the TSDR Survey capacity data base format to the new 1987 Biennial Report format for compatibility with the States' hazardous waste reporting system. These translations may be found in Appendix E of this report. In addition, the calculated 1986 available capacity field found in the TSDR Survey capacity data base will also appear in the dBASE III PLUS and flat files even though they are not a data field in the Biennial Report data base.

1.1 Background

Section 104(c)(9) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended by PL99-499 (SARA), requires each State to assure the EPA Administrator that adequate capacity will exist to manage the hazardous waste generated in the State over the next 20 years. A State's failure to submit an approvable State Capacity Assurance Plan (CAP) may prohibit the State from receiving Superfund money for remedial actions after October 17, 1989, until such time as a CAP is approved by EPA.

This report provides capacity data on commercial hazardous waste management facilities in all States. These data, along with those in the SARA State Capacity Reports, are designed to be used in conjunction with the Biennial Report data on waste generation to support the development of the State's CAP.

1.2 Sources of Data

The capacity data presented in this report are derived from EPA's National Survey of Hazardous Waste Treatment, Storage, Disposal, and Recycling Facilities (TSDR Survey) capacity data base. The TSDR Survey, conducted in 1987, is a census of all RCRA permitted and interim status treatment, disposal, and recycling facilities. A specialized data base on treatment, recycling, and disposal capacity was developed from the responses to the TSDR Survey for both regulatory support and support of the SARA capacity assurance project. The National commercial capacity data set is a subset of this specialized capacity data base. The TSDR Survey furnishes data on calendar year 1986 hazardous waste management activities in RCRA permitted and interim status units, as well as units exempt from RCRA permitting (baseline data), and also provides data on planned activities, including changes in capacity through 1992 at these facilities. Although the TSDR Survey was also sent to a statistical sample of facilities that have only RCRA permitted storage, the capacity data base does not contain information on storage.

NOTE THAT THE TSDR SURVEY DOES NOT CONTAIN INFORMATION ON HAZARDOUS WASTE MANAGEMENT ACTIVITIES IN UNITS EXEMPT FROM RCRA PERMITTING AT SITES THAT DO NOT REQUIRE A RCRA PERMIT.

1.3 Description of Data

This report presents capacity data for commercial facilities sorted by SARA management category (refer to Table 1) and by State. Note that "other disposal" (i.e., disposal other than by landfill, surface impoundments, land treatment, or deepwell injection) is not included because the TSDR Survey did not request data on this management category.

For the purposes of the SARA National commercial capacity data set, a "process" is defined as one or more units acting together to perform a single operation on a waste stream. A "system" is defined as one or more processes used together to manage a waste stream. All data in this report are presented at the system level. Because the TSDR Survey capacity data are reported on a unit process basis, a methodology was developed to derive system-based capacity data from the unit process data. A detailed description of the methodology is found in the report Technical Review and Evaluation Procedures for the TSDR Survey.

A list of the types of treatment, recovery, and disposal systems that compose the SARA State capacity data set, along with the methodology and key TSDR process codes used to categorize a system under the appropriate system type and SARA management category, can be found in Appendix D of this

Table 1 SARA Management Categories

Code	Management Category
1	Metals recovery
2	Solvents recovery
3	Other recovery
4	Incineration - liquids
5	Incineration - sludges/solids
6	Energy recovery - kilns, boilers, furnaces
7	Aqueous inorganic treatment
8	Aqueous organic treatment
9	Other treatment (e.g., pretreatment including settling and neutralization)
10	Sludge treatment
11	Stabilization
12	Land treatment
13	Landfill
14	Deepwell (underground) injection
15	Other disposal

report. Note that systems categorized under the organic/metals treatment system type are found under both the aqueous organic treatment and aqueous inorganic treatment SARA management categories. Appendix D also illustrates the translation from TSDR Survey process codes and the new 1987 Biennial Report codes to SARA management category codes.

For the TSDR Survey, hazardous waste was defined as State and TSCA hazardous in addition to RCRA hazardous; therefore, "hazardous waste" management capacity data in the State Reports, whether maximum or utilized capacity, refers to management of:

- Any waste considered hazardous waste by RCRA (40 CFR Part 261.3); also,
- Any waste considered hazardous by your State,
- Any waste considered hazardous in the State in which it was generated, even if not considered hazardous by your State,
- Waste containing polychlorinated byphenyls (PCBs),
- Waste containing asbestos, and
- Waste containing dioxins.

1.4 Data Fields

The data fields shown in Table 2 define the SARA State capacity data set. This section further explains some of the data fields.

Table 2 Data Fields in the SARA State Capacity Data Set

GENERAL

Facility ID No. (EPA Identification Number)
Facility name
Mailing location (city, state)
System number
Permit status of system
Commercial status of system
System type
Unit processes within the system
SARA management category

FOR TREATMENT/RECOVERY

System maximum capacity 1986 (all wastes)
System available capacity 1986
System utilized capacity 1986 (hazardous waste)
System utilized capacity 1986 (nonhazardous waste)
System utilized capacity 1986 (total)
System maximum capacity 1987 (all wastes)
System capacity change 1987
System maximum capacity 1988 (all wastes)
System capacity change 1988
System maximum capacity 1989-90 (all wastes)
System capacity change 1989-90
System maximum capacity 1991-92 (all wastes)
System capacity change 1991-92

FOR LANDFILLS/DISPOSAL IMPOUNDMENTS

Remaining capacity 1986 (hazardous waste)
Disposal rate 1986 (utilized hazardous waste capacity)
Disposal rate 1986 (utilized nonhazardous waste capacity)
Disposal rate 1986 (total)
Net facility change 1987
Net facility change 1988
Net facility change 1989-90
Net facility change 1991-92

Table 2 (continued)

FOR DEEPWELL INJECTION

System maximum capacity 1986 (hazardous wastes)
System utilized capacity 1986 (hazardous waste)
System utilized capacity 1986 (nonhazardous waste)
System utilized capacity 1986 (total)
System maximum capacity 1987 (hazardous wastes)
System capacity change 1987
System maximum capacity 1988 (hazardous wastes)
System capacity change 1988
System maximum capacity 1989-90 (hazardous wastes)
System capacity change 1989-90
System maximum capacity 1991-92 (hazardous wastes)
System capacity change 1991-92

FOR LAND TREATMENT

System maximum capacity 1986 (all wastes)
System available capacity 1986
System utilized capacity 1986 (hazardous waste)
System utilized capacity 1986 (nonhazardous waste)
System utilized capacity 1986 (total)
System maximum capacity 1987 (all wastes)
System capacity change 1987
System maximum capacity 1988 (all wastes)
System capacity change 1988
System maximum capacity 1989-90 (all wastes)
System capacity change 1989-90
System maximum capacity 1991-92 (all wastes)
System capacity change 1991-92

- System Number: The system number gives each treatment, recycling, and/or disposal system at a facility a unique identification. System numbers that end in any letter other than X represent linked, not independent, systems (e.g., system numbers 1A and 1B). Systems are linked if they compete for the capacity of a shared unit. Competition for capacity between systems occurs when a unit they share limits the capacity of at least one of the systems. The capacity reported for linked systems in the SARA State capacity data set is proportioned based on the percentage of the shared limiting unit's capacity that was devoted to managing wastes in each system during 1986 (utilization in 1986).

  For incineration and reuse as fuel, the system number ends in an A, B, C, or D to denote whether the capacity reported is for liquids, sludges, solids, or gases, respectively. An incineration or reuse as fuel unit that can handle more than one waste form will be assigned more than one letter, e.g., an incinerator with both liquids and sludges capacity would be assigned system numbers 1A and 1B.

- Permit Status of System: The permit status field indicates whether the entire system is exempt from RCRA permitting, the entire system is interim status or permitted under RCRA, or the system comprises exempt and interim status or permitted units.

- Commercial Status of System: This field indicates whether a management system is considered to be (1) commercial capacity, (2) captive capacity, or (3) onsite capacity. Commercial capacity is treatment, recycling, and/or disposal capacity that is available to the general public. Captive capacity is capacity that is available to a limited number of establishments that may or may not be under the same ownership. Onsite capacity is capacity for treatment, recycling, and/or disposal of waste at the facility where it was generated.

- Treatment/Recovery Capacity: The treatment/recovery maximum system capacity includes the capacity to treat both hazardous and nonhazardous wastes. The capacity change represents the change in maximum system capacity from year to year as reported in the TSDR Survey. The utilized system capacities for hazardous and nonhazardous waste are reported separately. Utilized capacity represents the amount of hazardous and/or nonhazardous waste that entered the treatment/recovery system in 1986. The available system capacity is estimated by subtracting the utilized system capacity for 1986 for hazardous and nonhazardous wastes from the combined maximum system capacity for hazardous and nonhazardous wastes. The capacity of linked systems is proportioned based on their utilized capacity in 1986. See System Number for a detailed explanation of linked systems.

- Landfill/Disposal Impoundment Capacity: Capacity data for landfills and surface impoundments used for disposal represent permitted disposal capacity at the entire facility rather than capacity for individual units. The disposal rates for hazardous and nonhazardous wastes in landfills and/or disposal impoundments are reported separately. The disposal rate represents the amount of hazardous and/or nonhazardous waste that entered landfills or disposal impoundments at each facility during 1986 and is reported as utilized capacity for this report. The net facility change includes only changes in capacity due to the opening or closing of a cell and does not include changes in capacity from utilization.

- Deepwell Injection Capacity: Capacity data for deepwell injection (underground injection) represent capacity for that type of management operation at the entire facility rather than capacity for individual units. Like treatment/recovery system capacity, the maximum capacity for deepwell injection is an annualized capacity. The 1986 maximum capacity reported for deepwell injection represents hazardous waste capacity only and is based on the facility's UIC permit. The maximum deepwell injection capacity for hazardous waste may change from year to year to include changes in permitted capacity reported in the TSDR Survey and is included in the capacity change for the appropriate year. The actual disposal rate for hazardous waste in 1986 is subtracted from the 1986 maximum capacity for hazardous waste to obtain the available capacity for that year.

- Land Treatment Capacity: Capacity data for land treatment represent capacity for that type of management operation at the entire facility rather than capacity for individual units. Like treatment/recovery system capacity, the maximum capacity of land treatment units is an annualized capacity. The maximum capacity includes the capacity to treat both hazardous and nonhazardous wastes. The utilized land treatment capacities for hazardous and nonhazardous wastes are reported separately. The available land treatment capacity for 1986 is calculated by subtracting the utilized capacity for hazardous and nonhazardous wastes from the combined maximum land treatment capacity for hazardous and nonhazardous wastes for 1986. The capacity change represents the change in maximum land treatment capacity from year to year as reported in the TSDR Survey.

- Unit of Measure: The data presented in this document is in English tons. Since the facilities reported their data in either tons, gallons, cubic yards, or million standard cubic feet, the conversion factor for water was used, unless a more accurate conversion factor was available for a particular waste. Therefore, 1 ton is the equivalent of 240 gallons, 1.1881 cubic yards, or 0.045 million standard cubic feet.

1.5 Summaries of Capacity Data

Table 3 lists all of the commercial facilities included in this report by EPA ID number, name and address. It should be noted that a facility with at least one commercial system is considered a commercial facility, although it may also have captive and onsite systems.

Tables 4 through 11 are summaries of the data found in Sections 2 through 4 of this report. These summary tables appear at the end of Section 1, and are designed to provide an overview of some of the important capacity issues.

Table 4 provides the maximum capacity of systems operational during 1986 for each SARA management category (except landfills) by system commercial status. Table 5 lists the percent of the maximum capacity listed in Table 4 that was utilized in 1986. This accounts for the management of both hazardous and nonhazardous wastes in treatment/recovery systems and land treatment units, but accounts for the management of only hazardous waste by deepwell injection.

Table 6 presents a summary of 1986 maximum capacity for commercial systems at commercial facilities by SARA management category for each State. Tables 7 and 8 present this same information for captive and onsite systems at commercial facilities, respectively.

Table 9 provides a summary of commercial landfill capacity at commercial facilities in each State. It reports the 1986 hazardous, nonhazardous, and total (hazardous plus nonhazardous) waste capacity utilized, and the 1986 remaining landfill capacity. Tables 10 and 11 present the same information for captive and onsite landfills, respectively.

1.6 Contents of Report

Sections 2, 3, and 4 present capacity data sorted by SARA management category for commercial systems, captive systems, and onsite systems, respectively. The systems included in each SARA management category are listed in order of their EPA ID number. Each section is further divided into two subsections. Subsection 1 presents treatment capacity data. Subsection 2, when applicable, presents disposal capacity data. Subtotals are provided for each system type under a SARA management category. The grand total is the summation of all subtotals under the same SARA management category. These grand totals are provided for use in conjunction with Biennial Report data on waste generation to support the development of the State's CAP.

Appendix A contains a facility profile for each commercial facility that provided data in the TSDR Survey. The profile provides all the data available in the SARA State capacity data set for each system at that facility. Systems that treat both metals and organics are listed twice under the facility profiles because they are categorized under both the aqueous organic and aqueous inorganic SARA management categories.

Appendix B contains a list of commercial facilities that have not returned a completed TSDR Survey or have not provided sufficient data to be included in the SARA State capacity data set. Appendix B also contains a list of facilities that claimed data reported by their facility to be confidential business information (CBI). Data from these facilities are presented in a separate CBI report.

Appendix C contains a list of the Biennial Report process codes. These process codes appear in the facility profiles and identify the unit processes that compose each management system.

Appendix D contains a list of the types of treatment, recovery, and disposal systems found in the SARA State capacity data set. Also included are the methodology and key TSDR process codes used to categorize a system under the appropriate system type and SARA management category. Appendix D also illustrates the translation from TSDR Survey process codes and Biennial Report process codes to SARA management category codes.

Appendix E provides translations from the commercial status and permit status codes used in the TSDR Survey capacity data base to the Biennial Report commercial status code and Biennial Report regulatory status code.
